

Assignment - 03

Roll NO :- 43236

Title :- mepex activity model

Objectives :-

- 1) To identify involves within the prepared s/w system
- 2) Design the activity diagram.

prerequisites :-

- 1) Linux/Ubuntu
- 2) Any uml 2.0 tool

Theory:-

Activity diagrams:-

It provides the view of behavior of the system by describing the sequence of actions in a process. They are similar to flowcharts because they show the flow b/w the actions in an activity. However, activity diagram can also show parallel or concurrent flow and alternate flows.

Activity diagram are comprised of the following model elements:-

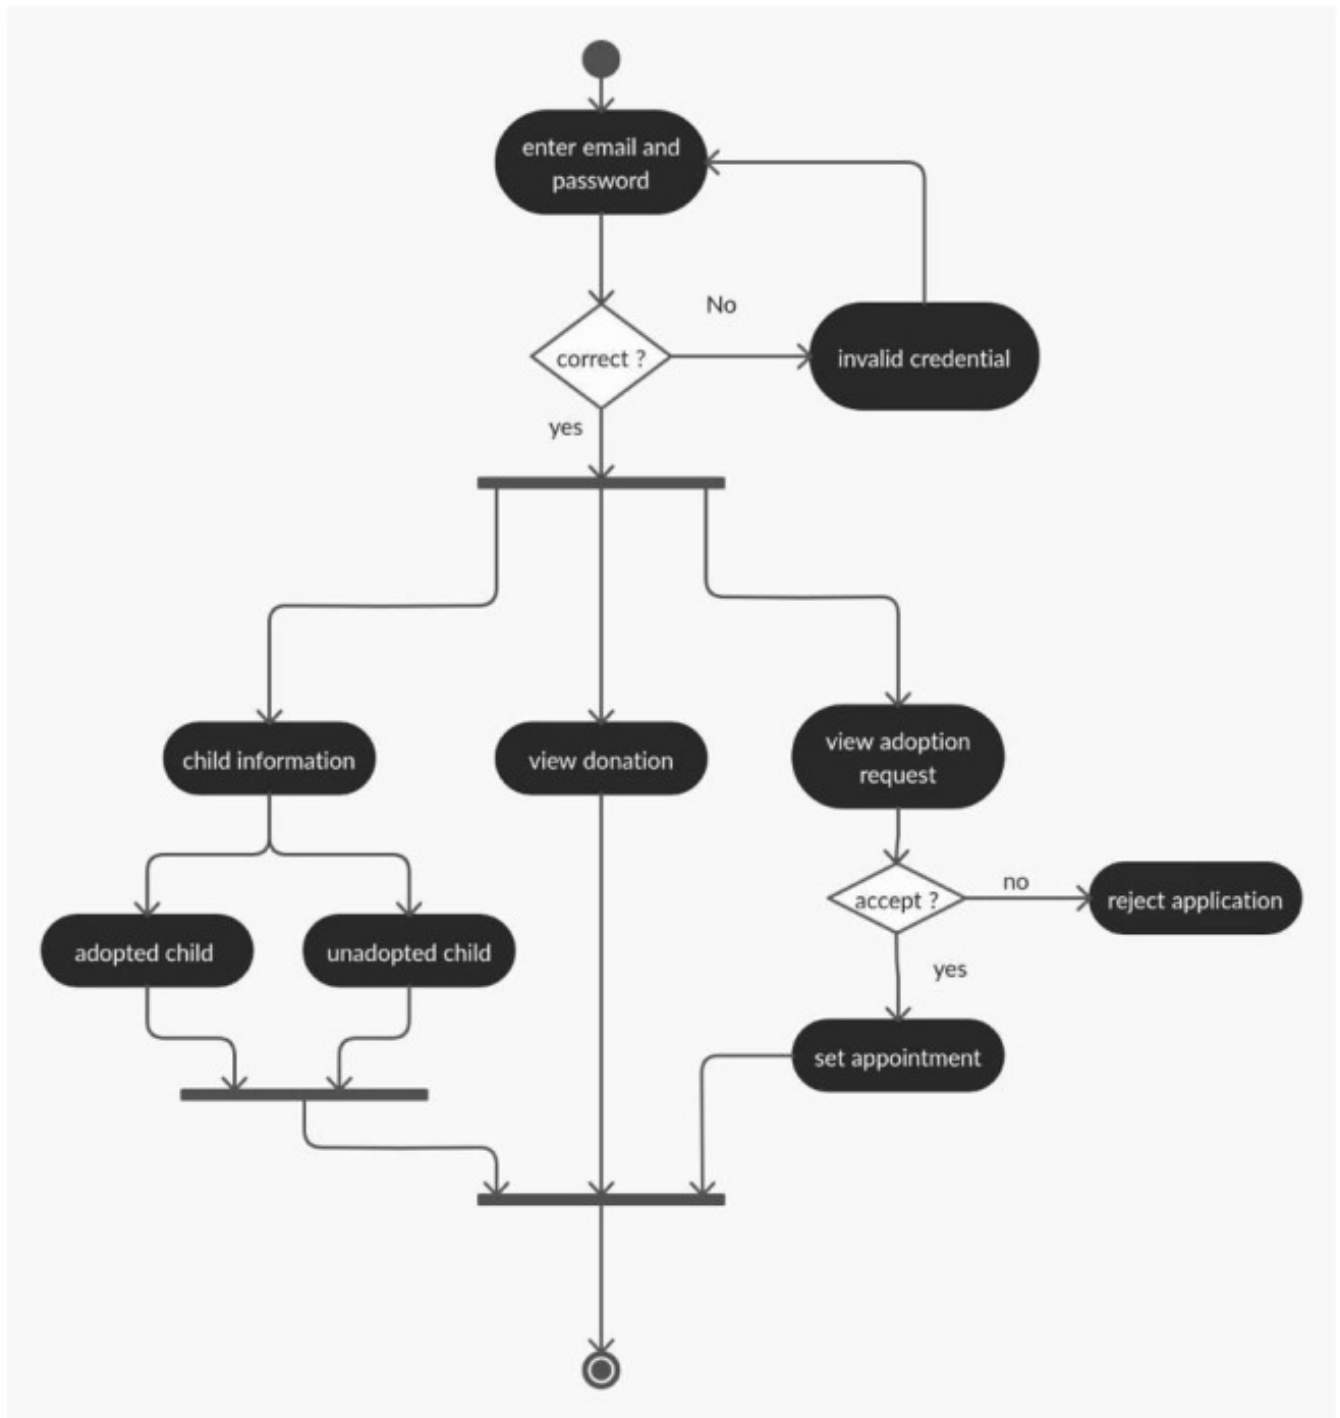

1) Activities - These are container elements that describe the highest level of behavior in an activity diagram.

- 2) Actions :- This represent a discrete unit of functionality in an activity.
- 3) control models :- It is an abstract activity node that controllers the flow of control in an activity
- 4) Object nodes :- It is an abstract activity node that helps to define the object flow in an activity
- 5) Activity edges :- It is a directed connection b/w two activity nodes.

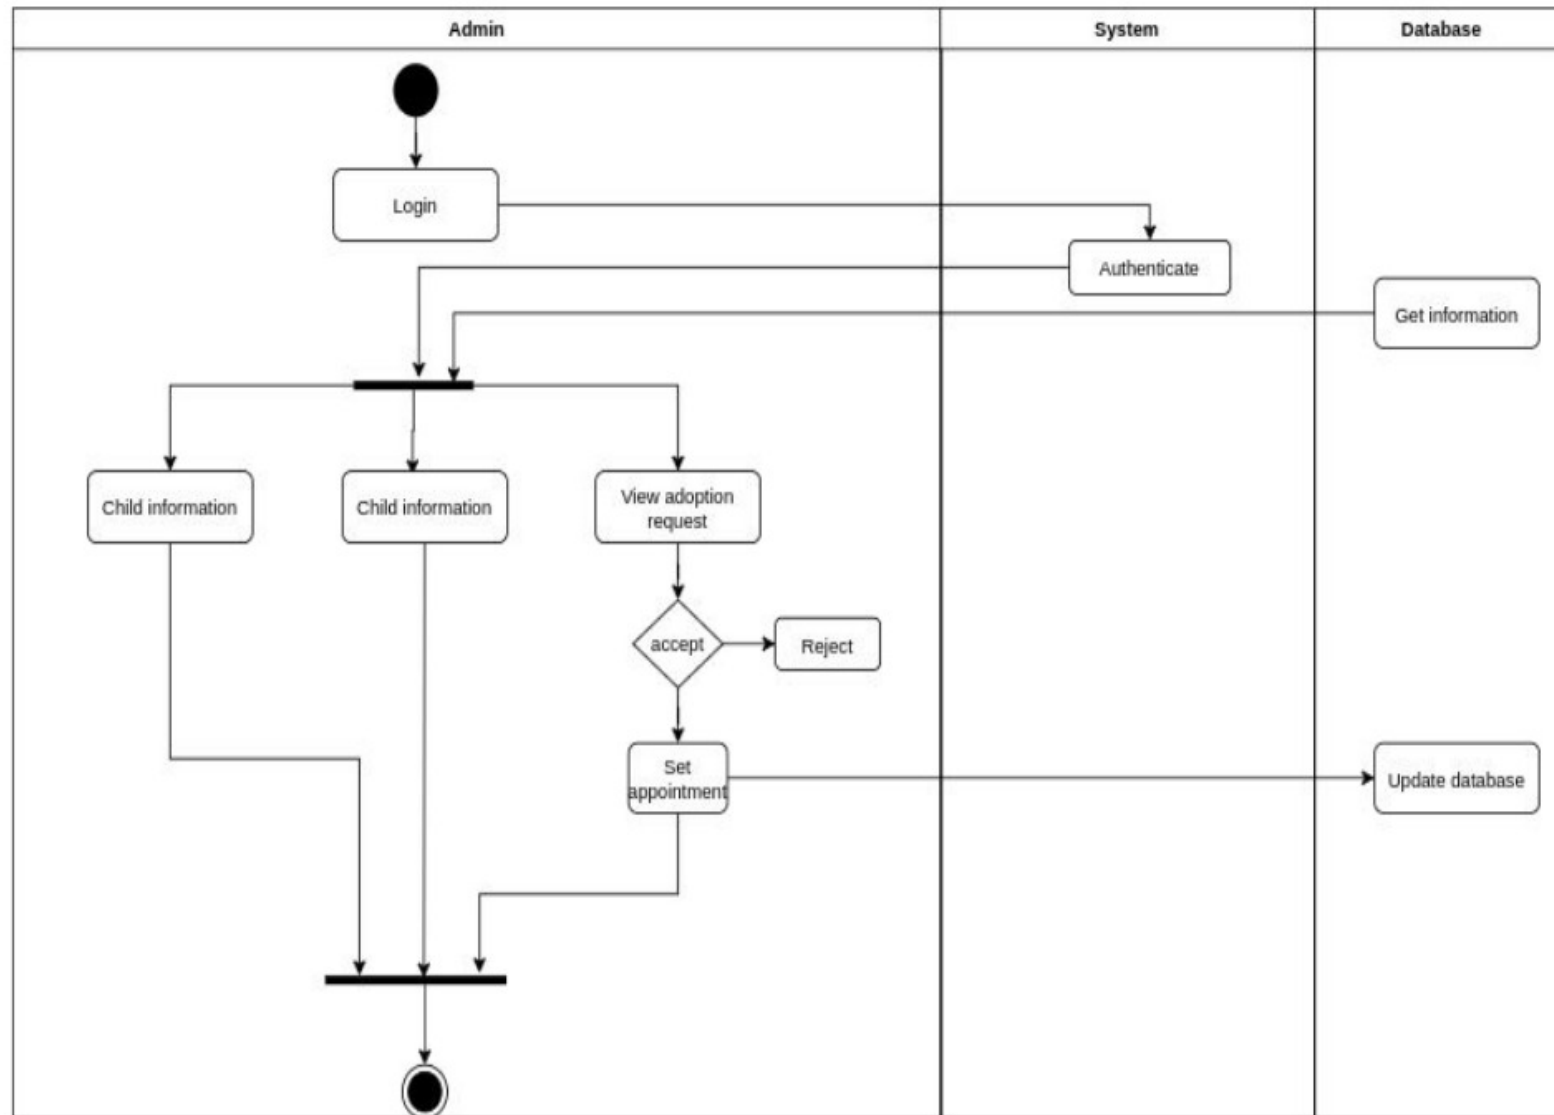

Conclusion:-

Thus we have implemented the activity for our project.

Activity diagram for system :

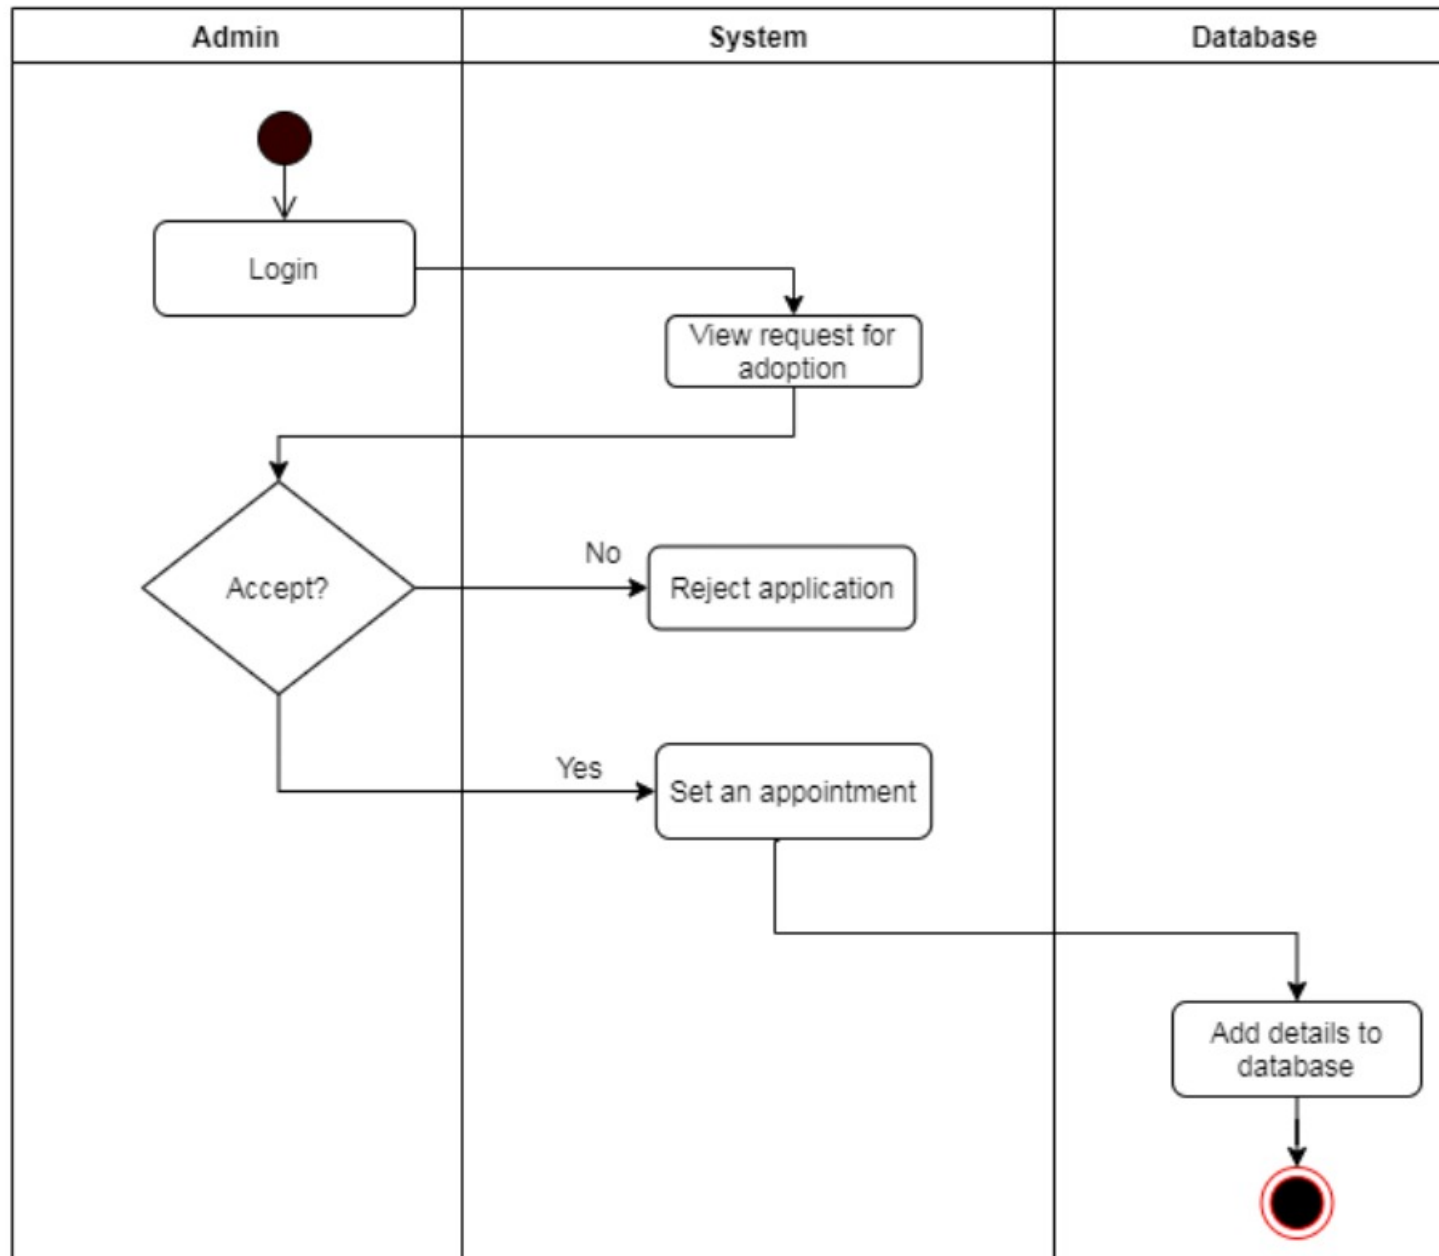

Activity diagram 4 : Admin panel

Activity diagram 3 : Login

Activity diagram 2 : Adoption

Activity diagram 1 : Registering a new child
